

23 October 2023

Dear Dr.Lyons

I am referring my patient, Sarah Davis (DOB: 03/07/1978), for your evaluation and management of suspected laryngopharyngeal reflux.

Ms. Davis reports a 4 month history of hoarseness, throat clearing, cough, and dysphagia. Symptoms occur daily but are worse in the mornings and evenings. She also describes heartburn and regurgitation 2-3 times per week. Ms. Davis has been treated with omeprazole 20mg daily for the past 2 months without improvement.

Past medical history is significant for migraines, hypothyroidism on levothyroxine, and C-section delivery of one child. Surgical history is only significant for C-section. She has no known drug allergies. Current medications include levothyroxine 75mcg daily and omeprazole 20mg daily.

I would appreciate your assessment and recommendations for Ms. Davis. Please let me know if any additional information is needed. Thank you for your time.

Sincerely,
Dr Chakraborty
